

Get approved for Virtual Power Plant (VPP) and Demand Response (DR) programs.

Unlock incentives for your customers.

Utility VPP and DR incentives improve customer ROI, lowering upfront costs, accelerating purchasing decisions, and making approved devices more attractive in the market.

Derapi enables your devices to be approved for utility and market-based VPP and DR programs, so your customers can qualify for incentives that reduce costs and speed up buying decisions.

By integrating your hardware with major VPP platforms through a single, trusted connection layer, we eliminate the technical and commercial friction that typically slows approval.

Start incentivizing customers

Utility VPP incentives lower the cost to buy and help customers move forward faster – but only when devices are approved to participate.

Streamline approvals

Approval requires integration with VPP platform operators and meeting utility and market program specifications, a process that often takes months (sometimes years) and internal resources you would rather spend elsewhere.

Derapi has unlocked hundreds of thousands of dollars in customer incentives

We enable access and innovation across the ecosystem by removing the friction that slows integration and approval.

**When the hard parts disappear,
momentum follows.**
